

DAY 1

SESSION 01

Getting Started with Codex & Antigravity

Mastering AI Development Tools & Standard Workflow (6 Hours /
360 Mins)

01 AI Dev Pipeline Basics

02 Folders, Files & Absolute Paths

03 Clear Tool Role Division

Day 1. Getting Started with Codex & Antigravity Session Start
Mastering AI development tools and standard workflows

Pre-Course Survey & Needs Assessment (Cohorts 1 & 2)

- ✦ **Survey Purpose:** Assess prior experience with AI/Web MVP development & understand learning expectations.
- ✦ **How to Participate:** Scan the QR code with your smartphone or click the direct link below.
- ✦ **Workflow:** After completing the survey, our hands-on 5-day AI MVP build begins immediately.
- ✦ **Data Usage:** Used exclusively for personalized coaching and educational performance analysis.

 **Scan with Phone Camera**
Pre-Course Survey (Cohorts 1 & 2)

 [Open Pre-Course Survey \(Google Forms\)](#) →

Day 1 Core Learning Objectives (4 Key Deliverables)

1. Shared Workspace Setup

Open the exact same project absolute directory (`my-project`) across both Codex and Antigravity.

2. Requirements Spec (MD)

Draft a structured `PAGE\_REQUIREMENTS.md` in Codex containing goals, layout, and acceptance criteria.

3. Spec-Driven Implementation

Let Antigravity parse the markdown spec and autonomously build the functional `index.html` web application.

4. Quality Validation & Polish

Test and verify implementation against specs in Codex, producing a structured `VALIDATION.md`.

The Modern AI Development Pipeline: Spec → Code → Verify

1. Specify (Codex)

Structure ideas into clean markdown specification documents.

2. Implement (Antigravity)

AI agent generates full-stack web code strictly from the spec.

3. Verify & Iterate

Compare output with specs, perform browser checks & fix issues.

Standard Project Folder & File Hierarchy

- ✦ **Root Directory:** `~/workspace/my-project`
- ✦ **README.md:** High-level service overview & goals.
- ✦ **PAGE_REQUIREMENTS.md:** UI layout, features & acceptance criteria.
- ✦ **VALIDATION.md:** Quality inspection checklist & test logs.
- ✦ **index.html:** Self-contained single-page web application.

```
my-project/  
├── README.md (Service Overview)  
├── PAGE_REQUIREMENTS.md (Codex Spec)  
├── VALIDATION.md (Codex QA Report)  
└── index.html (Antigravity Web App)
```

The Single Workspace Rule & Absolute Paths

Common Mistake: Folder Desynchronization

Opening different folders in Codex and Antigravity prevents the tools from sharing files and breaks the feedback loop.

Codex Workspace

Must open:

Antigravity Workspace

Must open:

Clear Role Division Between AI Tools

ACE Startup SW/AI Pilot

 Codex

Requirements drafting, spec refining, QA testing checklists & automated validation reports.

 Antigravity

Spec parsing, project scaffolding, UI/UX implementation, and full-stack single-file web code generation.

 Browser (Chrome)

The ultimate source of truth for visual rendering, interaction responsiveness, and user experience.

The 5-Step AI Development Loop

Step 1

Step 2

Step 3

Step 4

Step 5

The 3 Essential Elements of Effective AI Prompts

1. Explicit Goal

Clearly define what needs to be created or modified (e.g., single-page portfolio with glassmorphism UI).

2. Strict Constraints

Set technical boundaries (single HTML file, inline CSS, responsive layout, Pretendard font, no external build tools).

3. Acceptance Criteria

Define measurable completion checks (mobile rendering without horizontal scroll, working contact button hover effects).

Shared Workspace Setup & README.md

Codex Command / Instruction

Workspace Setup

```
Create a new project directory `my-project` and initialize README.md with the following:  
# Founder Intro & Problem Definition  
- Founder Profile: Name, background, target market  
- Core Problem: The key friction your target users face today  
- Solution Concept: How your proposed web app solves this problem
```

Drafting PAGE_REQUIREMENTS.md in Codex

 **Codex Prompt**

Spec Drafting

Read README.md and draft a structured PAGE_REQUIREMENTS.md containing:

1. Target Audience & Core Value Proposition
2. UI Layout Specifications (Hero Header, Problem/Solution Grid, Interactive Contact CTA)
3. Design System (Dark theme, glassmorphism card styling, responsive grid)
4. Acceptance Criteria (Single file index.html, no broken styles, mobile-ready)

Building Web Application with Antigravity

Antigravity Development Prompt

[Antigravity](#)

Read PAGE_REQUIREMENTS.md and build a complete index.html that satisfies all requirements:

1. Layout & Design:

- Apply modern dark glassmorphism UI with Pretendard typography.
- Consolidate CSS within <style> tags with responsive flex/grid layouts for mobile and desktop.

2. Required Components:

- Header: Founder profile (avatar, name, tagline, 3 domain tags)
- Body: Problem & Solution comparison cards (icons, titles, descriptions)
- Footer: Interactive contact CTA button with smooth hover micro-animations

3. Delivery: Output a single, production-ready index.html file that opens cleanly in any modern browser.

Quality Validation & QA Check in Codex

Codex Validation Prompt

[Validation](#)

Review `index.html` against `PAGE_REQUIREMENTS.md`:

1. Identify any missing requirements or rendering inconsistencies.
2. Create `VALIDATION.md` containing a structured QA checklist (Pass/Fail) with rationales.
3. If issues exist, document actionable remediation prompts for Antigravity.

Day 1 Autonomous Challenges (Bonus 01 & 02)

ACD Startup SW/AI Pilot

Bonus 01 • UI/UX Challenge

Mobile Viewport & Responsive Layout Optimization

Refine CSS media queries for seamless 1-column layouts on smartphones (360px–480px) without horizontal scrolling.

Deliverable: `my-project/index.html` (Responsive Polish)

Bonus 02 • Interaction Challenge

Interactive Dark/Light Mode Toggle Switch

Implement an interactive theme toggle switch with JavaScript event listeners and CSS custom property transitions.

Deliverable: `my-project/index.html` (Theme Switch Script)

Day 1 Daily Feedback Survey & Deliverable Submission

✦ **Daily Satisfaction Survey:** Please submit your honest feedback to help us fine-tune mentoring quality.

✦ **Submission Link:** Upload your Day 1 project folder (`my-project/index.html`, `PAGE\_REQUIREMENTS.md`, `VALIDATION.md`).

✦ **Mentoring Support:** Leave any blockers or technical questions in the survey for 1-on-1 instructor feedback.

 **Day 1 Feedback QR**

Scan with phone camera to complete

 **Submit Daily Feedback (Survey)** →

NEXT STEP

DAY 2 PREVIEW

Day 2: AI-Powered Project Planning

Transforming raw ideas into the single source of truth:

PROJECT.md

Great work today! Please make sure your Day 1 lab deliverables are submitted. See you tomorrow! 🎉

DAY 2

SESSION 01

Project Planning with AI

From Raw Ideas to PROJECT.md — Codex-Driven Planning
Documents (6 Hours / 360 Mins)

01 Idea → Problem Definition

02 User Flow · Screens · Data

03 PROJECT.md & HANDOFF

Today's Guiding Principle

Build one complete end-to-end user flow before adding more features.

- ✦ **MVP Definition:** Not a feature-depleted product, but the minimum build needed to test your core business hypothesis.
- ✦ **Day 2 Constraint:** Zero application coding. 100% focus on specification documentation and requirements scoping.
- ✦ **Deliverable:** The completed `PROJECT.md` becomes the authoritative guide for Day 3 Antigravity development.

Ideas vs. Problems: Finding the Difference

× Idea-Centric Approach

"I want to build an AI-powered travel planner app."

→ Starts from solution. Target customer and pain point remain ambiguous.

✓ Problem-Centric Approach

"Solo travelers in their 20s-30s spend over 2 hours creating daily itineraries."

→ Persona + Context + Core Pain Point + Desired Outcome.

Problem Definition Formula: [Target Persona] experiences [Pain Point] during [Context], resulting in [Friction/Cost].

Target Persona & Core Value Proposition

1

Specify clear characteristics (e.g., Early-stage founders lacking developer resources, Freelance designers managing invoices).

2

What single transformation does the user experience? (e.g., Reduce 2 hours of manual planning to a 3-minute AI workflow).

✦ **Key:** Focus on 1 primary persona and 1 core value proposition for MVP success.

End-to-End User Flow & Feature Scoping

MVP Golden Rule: 3 to 4 core screens maximum. Every screen must serve the primary conversion flow.

Text-Based Wireframing in Markdown

Describing UI hierarchy clearly in Markdown allows AI coding agents to produce clean HTML grids without Figma.

- ✦ **Header:** Logo, navigation tags, theme toggle
- ✦ **Main Hero:** Headline, description, input box
- ✦ **Results Section:** Card grid, data badges, copy buttons

```
+-----+  
| [Logo] AI Trip Planner [Theme] |  
+-----+  
| "Enter destination & duration" |  
| [ Tokyo, Japan ] [ 3 Days ] [Go] |  
+-----+  
| Day 1: Shibuya / Shinjuku [Copy] |  
| Day 2: Asakusa / Ueno [Copy] |  
+-----+
```

Data Schema & State Design for MVP

1. Client State Structure (JSON)

```
{
  "destination": "Tokyo",
  "days": 3,
  "theme": "Gourmet & Culture",
  "itinerary": [
    { "day": 1, "spots": [...] }
  ]
}
```

2. Local Storage Persistence

For Day 3 MVPs, use `localStorage` to save user history seamlessly without requiring a backend database setup.

The Single Source of Truth: PROJECT.md Architecture

Section 1~3

Project Overview, Target Problem, Core Value Proposition.

Section 4~6

User Flow, Screen Wireframes, Data Structures & State.

Section 7~8

Tech Stack Constraints, Acceptance Criteria, Out-of-Scope.

Antigravity reads PROJECT.md directly to generate production web applications without ambiguity.

Drafting Problem & Persona in Codex

Codex Prompt: Problem & Scope Scoping

Spec Phase 1

I want to plan an AI Web App MVP. My initial concept is [Explain concept in 2-3 sentences].
Please help me structure Section 1 (Overview), Section 2 (Problem Definition), and Section 3 (Target Persona & Core Value) following the standard PROJECT.md specification format.

Defining User Flow & Screen Wireframes in Codex

Codex Prompt: User Flow & Wireframing

Spec Phase 2

Based on the problem definition, design:

1. End-to-end user journey (Max 4 steps)
2. UI layout wireframes in Markdown for each screen
3. Complete Section 4 (User Flow) and Section 5 (Screen Specifications) for PROJECT.md.

Completing Full PROJECT.md in Codex

Codex Prompt: Full PROJECT.md Finalization

[Final Spec](#)

Consolidate all sections and generate the authoritative `PROJECT.md` file:

- Ensure Tech Constraints specify: Single HTML, Vanilla JS, inline CSS, Pretendard font, mock AI logic.
- Include explicit Acceptance Criteria and an Out-of-Scope list to prevent feature creep.

Session Transition with HANDOFF.md

- ✦ **Context Preservation:** Records what was accomplished in Day 2 for instant startup in Day 3.
- ✦ **AI Briefing:** Provides Antigravity with a concise executive summary before building begins.
- ✦ **Action Checklist:** Lists the exact first 3 implementation steps for tomorrow morning.

```
# HANDOFF.md
## 1. Day 2 Completed Deliverables
- PROJECT.md fully finalized
## 2. Day 3 Action Items
- Initialize HTML skeleton in Antigravity
- Build Hero & Input form components
```

Validating PROJECT.md Quality in Codex

1. Scoping Check

Is the core user journey achievable within 3 screens?

2. Spec Precision

Are button actions, data keys, and UI states clearly specified?

3. AI Readiness

Can an AI engineer build the page without asking further questions?

Day 2 Daily Feedback Survey & Deliverable Submission

- ✦ **Daily Survey:** Submit your Day 2 feedback and learning review.
- ✦ **Deliverable Upload:** Upload your `PROJECT.md` and `HANDOFF.md` files.
- ✦ **Instructor Check:** Mentors will review your PROJECT.md specs before tomorrow's build session.

 [Submit Daily Feedback \(Survey\) →](#)

Day 2 Feedback QR

Scan with phone camera to submit

NEXT STEP

DAY 3 PREVIEW

Day 3: Building MVP from PROJECT.md

Transforming specifications into working software with
Antigravity (MVP v0.1)

Planning is complete! Tomorrow we bring your product to life. Fantastic work today! 🚀

DAY 3

SESSION 01

Building MVP from PROJECT.md

Spec-Driven Antigravity Implementation & Codex QA Validation
(MVP v0.1)

01 PROJECT.md → Antigravity

02 End-to-End User Flow Implementation

03 Codex QA & Regression Check

Today's Guiding Principle

A working simple feature is 100x more valuable than a broken complex feature.

- ✦ **MVP v0.1 Goal:** Complete the single primary user journey from input to output without crashes.
- ✦ **Implementation Rule:** Feed PROJECT.md to Antigravity step-by-step; verify in Chrome at each stage.
- ✦ **QA Rule:** Use Codex to run structured regression checks against the specification checklist.

3-Stage Incremental Build Strategy

1

Header, hero section, input forms, and card containers with responsive CSS layout.

2

Form event handling, state manipulation, and simulated AI output generation.

3

Saving to `localStorage`, copy/share actions, and loading spinner micro-animations.

Scaffolding UI Skeleton with Antigravity

Antigravity Prompt: Initial UI Scaffolding

Phase 1

Read PROJECT.md thoroughly and scaffold the initial `index.html` structure:

- Follow the design system and screen layout defined in Section 5.
- Implement responsive CSS for mobile and desktop screens.
- Build the Header, Hero section, and Input form controls.

Implementing Core Interactive Logic

Antigravity Prompt: Logic & Simulation

Phase 2

Add core interactivity to ``index.html``:

1. Form submission handler: Validate user input and display a loading spinner state.
2. Output generation: Produce rich structured result cards matching Section 6 data schemas.
3. Handle empty input validation with friendly error hints.

Adding Persistence with LocalStorage

Antigravity Prompt: Storage & History

Phase 3

Implement local storage features:

1. Save generated outputs to ``localStorage`` under a dedicated key.
2. Render a "Recent Generations / History" list allowing users to reload previous results.
3. Add a "Copy to Clipboard" button with instant visual feedback.

Codex Regression Testing vs. PROJECT.md

Codex Prompt: Full MVP QA Inspection

[QA Testing](#)

Perform a full code review of ``index.html`` against ``PROJECT.md``:

1. Verify each acceptance criterion defined in Section 7.
2. Check for JavaScript console errors, responsive layout bugs, and broken interactions.
3. Update ``VALIDATION.md`` with test logs and remediation recommendations.

Defensive UX: Handling Edge Cases & Errors

1. Empty / Invalid Input

Display clear helper messages instead of failing silently or crashing.

2. Loading Feedback

Always provide spinners or skeleton loaders during async operations.

3. Empty State UI

Show friendly guidance when no search results or history entries exist.

Day 3 Extension Challenges

Bonus 01 · Export Features

Export Results as PDF / Markdown

Add a 1-click export button allowing users to download their generated plan as a clean `.md` or `.txt` file.

Bonus 02 · Analytics / Tracking

Usage Counter & Filter Tabs

Track the total number of generations and add category filter buttons to the history view.

Day 3 Deliverable Checklist

- ✦ **Functional Web App:** `my-project/index.html` runs locally and executes the full user journey.
- ✦ **Data Persistence:** Results are stored in `localStorage` and persist across page refreshes.
- ✦ **Validation Report:** `my-project/VALIDATION.md` confirms all core acceptance criteria pass.

Updating HANDOFF.md for Day 4

```
# HANDOFF.md (Day 3 Update)
```

```
## Completed:
```

- MVP v0.1 core flow fully functional in index.html

```
## Day 4 Goals:
```

- Add selective track extensions (API integration / Advanced UI)
- Implement comprehensive error recovery

Day 3 Daily Feedback Survey & Deliverable Submission

- ✦ **Daily Survey:** Submit your Day 3 build feedback.
- ✦ **Deliverable Upload:** Upload your working `index.html` and `VALIDATION.md`.
- ✦ **Mentoring:** Note any difficult bugs for tomorrow's live debugging clinics.

 [Submit Daily Feedback \(Survey\) →](#)

Day 3 Feedback QR

Scan with phone camera to submit

NEXT STEP

DAY 4 PREVIEW

Day 4: Feature Expansion & Polish

Selective track extensions, exception handling, and regression verification (MVP v1.0)

You built a working software prototype today! Tomorrow we level it up into a polished MVP v1.0. 🎉

DAY 4

SESSION 01

Feature Expansion & Product Polish

Selective Tracks, Exception Recovery & Regression Verification
(MVP v1.0)

01 Selective Feature Tracks

02 Defensive UX & Recovery

03 Zero-Regression QA in Codex

Today's Guiding Principle

Expansion must never break existing working features (Zero Regression).

- ✦ **Selective Tracks:** Choose 1 track suited to your product (Track A: Interactive UI/UX or Track B: Data & Export).
- ✦ **Resilience:** Handle network timeouts, empty queries, and local storage limits gracefully.
- ✦ **Regression Verification:** Re-test Day 3 core features in Codex every time new code is added.

Selective Feature Expansion Tracks

Track A: Interactive UI & Micro-Animations

Focus on visual polish: custom tabs, smooth accordion reveals, modal dialogs, and celebratory confetti effects upon completion.

Track B: Data Flow & Export Pipeline

Focus on utility: CSV/JSON/PDF export engines, multi-filter search sorting, and tag-based categorization.

Specifying Expansion Requirements in Codex

Codex Prompt: Track Spec Update

[Spec Update](#)

Review `PROJECT.md` and append Section 9: MVP v1.0 Feature Expansion:

- Selected Track: [Track A: Advanced UI / Track B: Data & Export]
- Specify exact new components, user actions, and acceptance criteria.
- Confirm that existing Day 3 core features remain untouched.

Implementing Track Extensions in Antigravity

Antigravity Prompt: Feature Extension

[Build v1.0](#)

Read Section 9 of `PROJECT.md` and upgrade `index.html`:

1. Implement the requested Track A / Track B features cleanly.
2. Maintain full backward compatibility with existing form inputs and local storage keys.
3. Ensure no regressions occur in the core user flow.

Defensive UX & Exception Recovery

1. Retry Mechanisms

Provide a "Retry" button when an operation encounters unexpected state.

2. LocalStorage Fallback

Wrap storage calls in ``try...catch`` blocks to protect against quota exceptions.

3. Clear Confirmation

Add confirm dialogs before destructive actions like "Clear All History".

Adding Exception Handling in Antigravity

Antigravity Prompt: Resilience & Error Handling

Defensive UX

Enhance error resilience in `index.html`:

1. Add input sanitization and length limits on all form fields.
2. Guard `localStorage` JSON parsing with try/catch and fallback defaults.
3. Provide a Toast Notification banner for success and error messages.

Full Regression Testing in Codex

Codex Prompt: Zero-Regression Audit

[QA Audit](#)

Conduct a complete regression audit of ``index.html``:

1. Re-validate all Day 3 core features to ensure zero regressions.
2. Test new Day 4 track extensions across desktop and mobile viewports.
3. Update ``VALIDATION.md`` to certify MVP v1.0 release readiness.

Day 4 UI Polish & Micro-Interactions

Bonus 01 · Sound & Haptics

Audio/Visual Feedback Effects

Add subtle Web Audio API chimes or visual ripple animations upon successful generation.

Bonus 02 · Keyboard Shortcuts

Power-User Hotkeys (Ctrl+Enter)

Allow users to submit forms with `Ctrl+Enter` / `Cmd+Enter` and close modals with `Escape`.

Day 4 Deliverable Checklist

- ✦ **MVP v1.0 Codebase:** Upgraded `index.html` featuring selective track extensions and defensive error handling.
- ✦ **Updated Specs:** `PROJECT.md` Section 9 updated to document all new functionality.
- ✦ **Release QA Certification:** `VALIDATION.md` updated with zero-regression test passes.

Final Preparation in HANDOFF.md for Day 5

```
# HANDOFF.md (Day 4 Release Prep)

## 1. MVP v1.0 Status: Feature-Complete & Tested

## 2. Day 5 Pitch Prep:

- 5-Minute Pitch narrative points

- Live deployment URL readiness check
```

Day 4 Daily Feedback Survey & Deliverable Submission

- ✦ **Daily Survey:** Submit your Day 4 feedback.
- ✦ **Deliverable Upload:** Upload your MVP v1.0 `index.html`, `PROJECT.md`, and `VALIDATION.md`.
- ✦ **Pitch Preparation:** Prepare your 1-sentence value proposition for tomorrow's demo day.

 [Submit Daily Feedback \(Survey\) →](#)

Day 4 Feedback QR

Scan with phone camera to submit

NEXT STEP

DAY 5 PREVIEW

Day 5: Deployment, Pitch & Roadmap

Live deployment check, 5-minute pitch presentations, peer reviews, and next steps

Your MVP v1.0 is ready! Tomorrow is Demo Day. Let's finish strong! 🚀

DAY 5

SESSION 01

Live Deployment, Demo Day & Next Steps

Live Launch, 5-Minute Pitch Presentations, Peer Reviews & 2-Week Roadmap (6 Hours / 360 Mins)

01 Live Deployment & QA Check

02 5-Min Founder Pitch & Demo

03 Peer Reviews & Future Roadmap

Today's Guiding Principle

Code without users is just code. Deployed software with real user feedback is a business.

- ✦ **Demo Day Goal:** Deliver a concise 5-minute pitch demonstrating your live MVP solving a real problem.
- ✦ **Peer Review:** Give and receive actionable feedback on usability, market clarity, and UX friction.
- ✦ **Future Roadmap:** Lay out the next 2 weeks of user testing and feature iteration.

Pre-Pitch Deployment & Live URL Check

1. Static Hosting

Deploy to GitHub Pages, Vercel, or Netlify to get a shareable HTTPS link.

2. Mobile Responsiveness

Open your live URL on a smartphone to verify touch targets and viewport layout.

3. Demo Fallback

Have your local `index.html` open in a backup browser tab just in case.

The 5-Minute Founder Pitch Structure

1. Problem (1m)

Who is suffering? What is the tangible friction?

2. Solution (1m)

How does your AI web app uniquely solve it?

3. Live Demo (2m)

Demonstrate the full user journey in your live app.

4. Roadmap (1m)

Next 2 weeks: User testing & business milestones.

Golden Rules for Live Product Demonstrations

- ✦ **Prepare Sample Data:** Keep realistic inputs ready on your clipboard so you don't waste time typing.
- ✦ **Focus on the 'Aha!' Moment:** Highlight the exact screen where your user gets instant value.
- ✦ **Don't Explain Code:** Investors and users care about business value, simplicity, and speed — not CSS lines.

Peer Review Rubric & Feedback Culture

1. Problem Resonance

Is the customer persona clearly defined and relatable?

2. User Experience

Is the navigation intuitive without instruction?

3. Technical Polish

Did the live demo execute cleanly without errors?

Final Deployment & Live URL Verification

Deployment Checklist

[Go Live](#)

- ✦ Push `index.html` to your GitHub repo and enable GitHub Pages under Settings → Pages.
- ✦ Copy your live HTTPS URL (e.g., `https://username.github.io/my-project/`).
- ✦ Test the live link on both your laptop and mobile device.

Drafting 5-Minute Pitch Script in Codex

Codex Prompt: Pitch Script Generation

[Pitch Script](#)

Read `PROJECT.md` and draft a concise 5-Minute Pitch Script (`PITCH.md`):

1. Hook & Problem Statement (1 min)
2. Solution & Live Demo Narrative (2 mins)
3. Competitive Edge & Tech Stack (1 min)
4. 2-Week Post-Bootcamp Milestone Roadmap (1 min)

Demo Day Presentations & Live Feedback

Presentation Rules:

- ✦ **Time Limit:** Exactly 5 minutes pitch + 2 minutes peer Q&A.
- ✦ **Live Screen Share:** Show your deployed URL in real-time.
- ✦ **Peer Scorers:** Fellow founders submit constructive feedback on the peer review sheet.

2-Week Post-Bootcamp Action Roadmap

Week 1: User Testing

Share your live URL with 10 real target users and log their feedback.

Week 2: Iteration

Refine `PROJECT.md` and use AntigraVity to deploy v1.1 improvements.

Month 1: Traction

Collect first 50 organic signups or letters of intent (LOI).

Generating ROADMAP.md in Codex

Codex Prompt: 2-Week Action Roadmap

[Roadmap Spec](#)

Draft `ROADMAP.md` incorporating feedback received during Demo Day:

1. Top 3 user friction points to resolve
2. Week 1 user interview schedule (Goal: 10 target users)
3. Week 2 technical improvements and deployment milestones

5-Day Bootcamp Final Deliverables Checklist

- ✦ **1. Live Web App:** Deployed, public HTTPS URL running your MVP v1.0.
- ✦ **2. Complete Spec Repository:** `PROJECT.md`, `VALIDATION.md`, `PITCH.md`, `ROADMAP.md`.
- ✦ **3. Pitch Presentation:** Completed 5-minute live demo.

Recap: From Zero to Deployed AI Startup in 5 Days

Certification, Mentoring & Next Chapter

- ✦ **Completion Certificate:** Issued upon successful submission of all 4 key artifacts and survey completions.
- ✦ **Alumni Network:** Join the ACE Startup Slack community for ongoing peer collaboration and mentoring.
- ✦ **Investor Office Hours:** Top-rated demo day projects will receive 1-on-1 investor advisory sessions.

Day 5 Daily Feedback Survey & Final Repository Submission

- ✦ **Daily Survey:** Submit your Day 5 pitch feedback.
- ✦ **Final Repository:** Submit your live URL and project folder (`index.html`, `PROJECT.md`, `ROADMAP.md`).

[✎ Submit Day 5 Survey →](#)**Day 5 Survey QR**

Scan with phone camera to submit

5-Day Post-Course Comprehensive Evaluation Survey (Cohorts 1 & 2)

- ✦ **Evaluation Purpose:** Comprehensive assessment of learning outcomes, curriculum satisfaction, and mentoring quality.
- ✦ **Certification Prerequisite:** Completion of this survey is mandatory for official certificate issuance.
- ✦ **Continuous Improvement:** Your feedback directly shapes future cohorts and advanced incubation programs.

 **Post-Course Survey QR**
Comprehensive Evaluation (Cohorts 1 & 2)

 [Open Post-Course Evaluation Survey →](#)

COMPLETED

AI STARTUP BOOTCAMP

5-Day AI Startup Bootcamp

Congratulations on Completing the Journey! 🎉

Day 1 Setup → Day 2 PROJECT.md → Day 3 MVP v0.1 → Day 4
MVP v1.0 → Day 5 Live Launch & Pitch

Your ideas are now live, running web businesses powered by AI. We cheer on your next entrepreneurial adventures! 🚀
