TODAY Write Channels.

What This Session Produces

Every session leaves participants with a usable BM artifact.

LESSON GOAL Choose the first market, message, channel, and GTM sequence before scaling.

01

ICP

Choose the first target customer.

This identifies the first customer group worth targeting.

02

Positioning

Show how the solution sits in the customer's mind.

This explains why the solution matters now for that ICP.

03

Channel Strategy

Select where customers are reached.

This chooses repeatable paths to reach and convert users.

04

GTM Plan

Sequence the first market entry actions.

This sequences the first market-entry actions.

PART 1

GTM Is the System

Channel is one component inside the market-entry plan.

Channel Is One Part of GTM

GTM is broader: ICP, message, channel, positioning, offer, and conversion motion must fit together.

Channel is not the opposite of GTM. It is one component inside GTM.

GOOD QUESTION

Which channel repeatedly reaches this ICP with the right message and conversion path?

GTM = ICP × Channel × Positioning × Motion

A launch plan needs all four elements, and each element must reinforce the others.

01

ICP

Who is the first best customer?

02

Channel

Where can we reach them repeatedly?

03

Positioning

Why are we the right answer now?

04

Sales Motion

How do they move from interest to adoption?

A Strong ICP Scores High Across Four Filters

These are not pass/fail requirements. The more signals a segment has, the stronger it is as your first ICP.

01

High Pain

Strong signal: the pain is urgent, frequent, and costly enough to trigger action.

02

Reachable

Strong signal: you can repeatedly reach them through known channels or communities.

03

Budget or Authority

Strong signal: they can pay, approve spending, or influence the buyer.

04

Fast Feedback

Strong signal: they can test quickly and respond with useful evidence.

HOW TO USE Use these as filters, not absolute rules: prioritize the segment with the strongest combined evidence.

Persona Explains the Person; ICP Chooses the First Market

Use persona for empathy, then turn it into an ICP filter for GTM decisions.

EMPATHY TOOL

Persona

A human-like profile used to understand motives, anxieties, behavior, and language.

Use it for empathy: how this person thinks, decides, and reacts.

GTM FILTER

ICP

A narrower target filter derived from the persona: segment, pain intensity, budget, reachability, and adoption readiness.

Use it for GTM: who to target first and where to find them repeatedly.

Persona explains the person. ICP chooses the first market.

ICP Statement Formula

Make the first customer concrete.

We first target **[customer]** in **[context]** who struggle with **[pain]** and can be reached through **[channel]**.

01

Customer

Role or segment

02

Context

Market or situation

03

Pain

Trigger for action

04

Channel

Reach path

Paystack's Developer-Led Beachhead

The first channel matched the adoption behavior.

CASE STUDY

Paystack

Read the case as a GTM decision: which ICP felt the pain, which channel created trust, and which motion turned adoption into proof?

01 ICP

Developers and online merchants who felt payment integration pain before the broader market cared about payment infrastructure.

02 Channel

Developer communities, documentation, integrations, and ecosystem trust made the first adoption path repeatable.

03 Positioning

The message was not broad fintech. It was simpler payment acceptance for teams trying to sell online.

04 Motion

API adoption let developers start with a practical integration, then merchant usage and transaction behavior created stronger proof.

Paystack Case Study: GTM as System, NOT a Marketing Campaign

Lesson point: Paystack worked because ICP, channel, positioning, and sales motion reinforced one another.

01 ICP

The first useful audience was not "all businesses." It was developers and online merchants who felt payment integration pain.

Lesson point: ICP must be narrow enough to reach and specific enough to message.

02 Channel

Developer communities, integrations, documentation, and tech ecosystem trust made adoption repeatable.

Lesson point: a channel is useful only when it repeatedly reaches the ICP and creates trust.

03 Positioning

Customers recognized Paystack as the easier payment infrastructure choice versus slower, fragmented alternatives.

Lesson point: positioning defines how customers perceive your product in the market and against competing alternatives.

04 Sales Motion

Self-serve API adoption allowed developers to start before a heavy sales process.

Lesson point: sales motion must match customer behavior and product complexity.

Channels Must Match Customer Behavior

Do not choose channels because they are fashionable.

01

WhatsApp

High-touch relationship and informal commerce.

02

Agents

Offline trust and last-mile access.

03

Instagram

Discovery for consumer and lifestyle offers.

04

Partnerships

Institutional reach or bundled access.

05

App Store

Self-serve digital adoption.

06

Events

Trust-building and founder-led selling.

Marketing Channels Used by Nigerian Small Businesses

WhatsApp Business leads, but the right GTM depends on how that channel converts.

Organize Channels Around Your ICP

Do not ask "Which channel is popular?" Ask where the ICP already gathers, which channel reaches them, and how trust is won.

01 Where are they?

List the places, groups, routines, and buying moments where the ICP already appears.

EXAMPLES

WhatsApp groups, trade associations, developer forums, market clusters.

02 Which channel?

Choose the reach path that can be repeated, measured, and owned by the team.

EXAMPLES

referrals, agents, partnerships, content, API/docs, events, paid ads.

03 How do you win trust?

Define the trust mechanism that makes the ICP believe the offer before they buy.

EXAMPLES

peer proof, official partner, field demo, guarantee, case evidence.

04 What is the next action?

Make the first step low-friction and tied to learning, not just awareness.

EXAMPLES

pilot booking, audit, trial, merchant onboarding, API integration.

Choose Channels by Trust Level, Not Just Reach

Each channel has a different trust starting point. Match the channel to the proof customers need before they act.

HIGH TRUST

Referrals / Associations

Pros: borrowed trust, warm introduction, faster first conversation.

Cons: limited scale unless the referral loop is deliberately designed.

HIGH TRUST

Agents / Field Sales

Pros: strong explanation, local presence, cash / offline support.

Cons: expensive to manage; quality control and incentives matter.

MEDIUM TRUST

WhatsApp / Communities

Pros: direct reach, peer context, fast feedback from real users.

Cons: trust depends on who shares it; spam quickly damages credibility.

LOW TRUST

Cold Ads / Broad Social

Pros: scalable testing, broad discovery, measurable acquisition funnel.

Cons: weak trust at first touch; needs proof, offer, and retargeting.

Good Channels Have Repeatability

One lucky introduction is not a channel.

RISK

Weak Channel

Hard to repeat, unclear owner, no conversion path.

BETTER DIRECTION

Strong Channel

Repeatable reach, measurable conversion, clear economics.

PiggyVest

Harnessing social proof and viral referral loops · B2C fintech, savings and investment app

CHANNEL · WHERE

Where customers first encountered PiggyVest

Twitter (X) and Instagram

Referral invite links

App store (iOS + Android)

Referral can be cheaper than ads. But only when the offer gives users a reason to invite others.

GTM STRATEGY · HOW

Community-led + referral loop

PiggyVest targeted urban millennials who distrusted traditional banks. The channel was not just social media; the GTM turned peer influence into a conversion engine.

Referral incentive: both referrer and new user receive value, so existing users become a low-cost acquisition path.

KEY INSIGHT

Instagram is only a platform. PiggyVest made it part of a referral system that converted users through social proof.

PART 2

Positioning and Journey

Make the customer understand why you matter.

Positioning Means Owning a Clear Place in the Customer's Mind

Use an X–Y map to show how customers compare you against alternatives.

How to read it

1. Pick two attributes customers care about.
2. Place current alternatives honestly.
3. Show where your first beachhead is clearly different.
4. Turn that position into a message.

NOT DECORATION

A positioning map is not decoration. It forces the team to explain why this ICP should see your product as the better choice now.

Positioning Statement Formula

Use plain language before marketing language.

For **[ICP]**, **[product]** is a **[category]** that solves **[pain]** better than **[alternative]** by **[differentiator]**.

01

ICP

First customer

02

Category

Product frame

03

Pain

Main problem

04

Differentiator

Why better

Positioning Examples From Existing GTM Deck

These examples show positioning as a customer choice, not a slogan.

01 Paystack

For Nigerian online merchants and developers, Paystack is a payment infrastructure tool that makes online payment acceptance faster and more reliable.

Differentiator: developer-friendly integration, local payment context, and merchant revenue focus.

02 Flutterwave

For African merchants expanding across markets, Flutterwave is payment infrastructure that simplifies multi-country collection and settlement.

Differentiator: corridor coverage, merchant infrastructure, and pan-African payment operations.

03 PiggyVest

For urban Nigerians who struggle to save consistently, PiggyVest is a digital savings app that turns discipline into a social and behavioral product loop.

Differentiator: locked savings, community trust, reminders, and referral momentum.

04 Moniepoint

For MSMEs managing daily payments and cash flow, Moniepoint is business banking built around merchant operations.

Differentiator: POS reach, support, transaction visibility, and local merchant trust.

A Journey Map Connects Customer Emotion to GTM Action

A useful journey map shows behaviour, emotion, channel, message, KPI, and internal action at each stage. Example: an online grocery store.

	AWARENESS	CONSIDER.	DECISION		DELIVERY & USE			LOYALTY & ADVOCACY	
CUSTOMER ACTIVITIES	Hear from friends, see offline or online ad, read from newspapers	Compare & evaluate alternatives	Add groceries to shopping cart	Make an order	Receive or pick up an order	Contact customer service	Enjoy groceries	Order again and/or order more	Share experience
CUSTOMER GOALS	No goals at this point	Find the best solution to buy food	Find and select products easily, get inspired	Order effortlessly	Receive or pick up an order effortlessly and when needed	Get help if problems appear, request for refund	Have the right and good quality ingredients	Repeat good customer experience	Share feelings, give feedback
TOUCHPOINTS	Word of mouth, traditional media, social media	Word of mouth, website, brick & mortar store, social media	Website / mobile	Website, app, order confirmation email	Delivery service, packing, messages (email, SMS, phone call)	Phone, email, chat	Food products, packages, other materials	Web / email / phone	Word of mouth, social media
EXPERIENCE	Interested, curious	Requires effort but excited	Excited	"Payment is painful"	Requires effort, happy when received	Frustrated	Satisfied	"This is easy"	"I have to share this"

Every Stage Needs a Business Goal, a KPI, and an Owner

The same journey read from the inside: what the company must do, measure, own, and support with systems.

	AWARENESS	CONSIDER.	DECISION		DELIVERY & USE			LOYALTY & ADVOCACY	
BUSINESS GOAL	Increase awareness and interest	Increase number of website visitors	Increase shopping cart value & conversion rate	Increase online sales and conversion rate	Deliver on time and minimise the delivery window	Increase customer service satisfaction, minimise waiting time	Make products match expectations	Increase retention rate and order value and/or frequency	Turn customers into advocates; turn negative experiences positive
KPIs	Number of people reached	New website visitors	Shopping cart value, conversion rate	Online sales, conversion rate	On-time delivery rate, average delivery window	Customer service success rate, waiting time	Product reviews	Retention rate, order value and frequency	Customer satisfaction
ORG. ACTIVITIES	Create marketing campaigns and content offline and online, PR	Create marketing campaigns and content offline and online	Optimise grocery shopping experience	Optimise online purchase funnel, order handling	Picking & delivery	Organise customer service	Develop products & product range	Target marketing, make re-ordering easy, upselling and cross-selling	Manage feedback and social media, develop sharing / inviting possibilities
RESPONSIBLE	Marketing & Communications	Marketing & Communications	Online development, Customer service	Online development, warehouse, logistics	Warehouse, logistics	Customer service	Product development, purchasing	Marketing, online development	Customer service, online development
TECHNOLOGY SYSTEMS	CRM analytics, programmatic buying platform, social media	CRM analytics, CMS, marketing automation	CRM analytics, CMS, ecommerce platform, PIM	CRM analytics, CMS, ecommerce platform, PIM, inventory system, marketing automation	CRM analytics, order & delivery system, marketing automation	CRM analytics, help desk, ticketing system, chat	CRM analytics, vendor management system, PIM	CRM analytics, marketing automation, ecommerce platform	CRM analytics, marketing automation, ecommerce platform, form, social media analytics

Customer Journey Map Example: PiggyVest

Retention and referral are designed into the GTM, not added after launch.

	AWARENESS	CONSIDERATION	PURCHASE	RETENTION	REFERRAL
Behaviour	Sees friend post: "I saved with PiggyVest"	Checks reviews; asks friends about losing money	Downloads app and creates first vault	Gets weekly reminder; sees balance grow	Sends referral link to friends
Emotion	Curious: "How did they save?"	Skeptical: "Can I withdraw?"	Safe enough to try small	This works; I did not miss the money	I want my friends to win too
Channel	Twitter, Instagram, WhatsApp forward	WhatsApp chat, app store page, replies	App store, onboarding flow, referral link	Push notification, email digest, milestone badge	WhatsApp forward, referral link
Message	Join Nigerians saving smarter	CBN-licensed. Your money is insured.	Lock a small amount today. Watch it grow.	You saved this month. Keep going.	Send this link; both receive value
KPI	Reach, impressions	CVR, DM response rate	Activation, time-to-first-save	30-day retention, repeat save rate	Referral rate, K-factor

Message Must Match the Journey Stage

Different stages need different proof.

01

Awareness

Name the pain.

02

Consideration

Show why the solution works.

03

Trust

Use proof, cases, or guarantees.

04

Conversion

Make the next step easy.

05

Retention

Show progress and value.

PART 3

GTM Plan

Turn positioning and channel into action.

GTM Is a Sequence, Not a Campaign

The first market entry should be staged.

01

Beachhead

Choose one narrow starting segment.

02

Message

Use problem language they recognize.

03

Channel

Pick one primary reach path.

04

Offer

Make a low-friction first action.

05

Feedback

Capture learning after each conversion.

Channel Strategy Example: Urban SMEs

A focused plan beats broad marketing.

CASE STUDY

Urban SMEs

Read the case as a decision: what pain was real, what evidence mattered, and what can transfer to the team's own model?

01 ICP

Cold-room, salon, and small service-business owners in Lagos who lose money when power or equipment reliability fails.

02 Channel

Associations, WhatsApp groups, local agents, and referral paths can repeatedly reach operators who already discuss the pain.

03 Message

Lead with the business consequence: reduce downtime, fuel spend, equipment risk, and missed customer revenue.

04 First Offer

Start with an energy-cost audit, pilot booking, or downtime calculator so the first action is easy and measurable.

Moniepoint Shows Why Offline Trust Can Be a Channel

For MSMEs, the strongest GTM may combine digital product with physical trust and local support.

01 Customer Reality

Small merchants may adopt digital finance through people and places they already trust.

Example: agent-assisted onboarding, field support, community visibility.

02 Message

The promise should focus on the job: receive payments, manage transactions, reduce cash friction, and keep business moving.

Example: "Never miss a sale because payment failed."

03 Channel Economics

Offline support must be measured. If agent acquisition works, track cost, conversion, retention, and transaction activity.

Example: agent productivity and merchant retention become GTM metrics.

04 Expansion Logic

Scale after a repeatable local playbook is proven, not before.

Example: start with one merchant segment or city cluster, then expand.

Measure the GTM Funnel

BRIDGE · SESSION 5

Next Session — Financial Planning

Financial Planning tests whether the GTM and business model can become economically sustainable.
