PITCH DECK DEVELOPMENT & INVESTOR COMMUNICATION

Pitch Deck Development & Investor Communication · **Session 7**

KOICA PMC

Seven Sessions Build One Business Model

S1–S5 complete the 9 blocks. S6–S7 turn the model into investment readiness and investor communication.

**9 BLOCKS BUILT
ACROSS S1–S5**

What This Session Produces

Every session leaves participants with a usable BM artifact.

LESSON GOAL Turn the completed business model into a 15-page investor story and follow-up system.

01

15-Page Deck

Build the investor-facing story.

This gives the team the investor-facing structure.

02

Pitch Narrative

Connect problem, model, traction, and ask.

This turns the BM into a story of evidence.

03

Investor Q&A

Prepare for diligence questions.

This prepares answers to the risks investors will test.

04

Follow-Up System

Communicate after the pitch.

This makes post-meeting communication professional and reliable.

PART 1

Pitch Deck Is a Story of Evidence

A deck is not a brochure. It is a short argument that reduces investor uncertainty.

Pitch Deck vs Business Plan

Both documents explain the company, but they are built for different decisions.

01

Business Plan

A detailed internal operating document. It can include assumptions, full market context, operational plans, hiring logic, compliance issues, and long-form financial detail.

Example: use a business plan when the team needs to align internally or when a grant / program asks for full implementation detail.

02

Pitch Deck

A concise, evidence-based investor narrative. It should make the opportunity understandable quickly and earn the next meeting, diligence request, or investment conversation.

Example: use a pitch deck when the audience must understand the problem, model, evidence, team, and ask within minutes.

A Strong Deck Does Four Jobs

Every slide should support an investor decision, not just describe the startup.

01

Clarity

The investor can explain the company in one sentence after reading the deck.

Example: Paystack = online payment infrastructure that helped African merchants accept digital payments.

02

Credibility

Claims are supported by behavior, revenue, pilots, partnerships, or credible market evidence.

Example: Moniepoint's MSME banking story is stronger when shown through merchant activity and distribution reach.

03

Momentum

Progress feels real because the deck shows what changed over time, not only what the founder hopes will happen.

Example: Flutterwave's pan-African story is stronger when traction, corridors, and merchant adoption are visible.

04

Ask

The next step is concrete: amount, milestone, timeline, and what risk the capital will reduce.

Example: raise capital to prove repeatable GTM, expand a proven channel, or reach a measurable transaction milestone.

15-Page Investor Deck Structure

One slide should show the full investor story in order. Number once, then explain why each page exists.

01

Cover

Can the investor understand the company category in five seconds?

02

Company Purpose

What change is the company trying to create, and why does it matter commercially?

03

Problem

Who has a painful, frequent, costly problem today?

04

Solution

How does the product remove that pain in a simple, believable way?

05

Why Now

What market shift makes this possible or urgent now?

06

Market Size

How large is the reachable beachhead and the long-term expansion?

07

Product

What does the user actually see, touch, or do?

08

Business Model

Who pays, for what unit, how often, and with what margin logic?

09

Traction

What behavior proves demand, repeat use, or willingness to pay?

10

Competition

What alternatives exist, and why can this beachhead win?

11

GTM

How will customers be reached, converted, and retained repeatedly?

12

Team

Why is this team unusually fit to solve this problem now?

13

Financials

What revenue, cost, runway, and scenario logic supports the ask?

14

Ask

How much capital is needed, for what milestones, by when?

15

Follow-Up

What appendix, data room, or diligence evidence should be ready next?

PART 2

Build the Narrative

The sequence should create belief before it asks for money.

Example: Problem Slide Makes Pain Concrete

A strong problem slide names the broken workflow before describing the product.

Problem

The Investment Analysis Process in Capital Markets Is Broken

Available options can't capitalize on modern data

- 01 Data overload from fragmented sources**
Enormous amount of time and money is wasted on stitching together expensive vendor solutions
- 02 Difficulty extracting useful insights**
Ability to generate insights has not kept up with 100x growth in data gen. since 2015, and investors are leaving value on the table
- 03 Outdated tools & legacy technology**
Bloomberg (1981), Refinitiv (1973), Factset (1978), Capital IQ (1998)

CONFIDENTIAL

WHAT TO NOTICE

Problem evidence before product language

Toggle AI names three specific failures — fragmented data, insights lagging 100x data growth, and vendor tools built in 1973–1998. In class, ask participants to identify the customer, the repeated workflow failure, and the measurable cost.

Use this pattern for Problem / Why Now.

Start With Purpose, Timing, and Product Clarity

The first pages should make investors understand what the company is, why now, and why it matters.

01

Company Purpose

State the specific change and who benefits. Avoid broad slogans that hide the business logic.

METRIC HINT

target customer + pain + promised change

02

Why Now

Tie urgency to a real market shift: regulation, infrastructure, user behavior, cost shock, or distribution change.

METRIC HINT

adoption rate, regulatory trigger, market timing

03

Product Clarity

Show the actual workflow: screen, demo still, product map, or usage path. Make the product easy to picture.

METRIC HINT

activation, task completion, time saved

04

Business Model

Explain how money is made before the reader gets lost in market size or future ambition.

METRIC HINT

price, take-rate, ARPU, gross margin

Example: Product Slide Should Show the Real Workflow

A pitch deck product page should reduce explanation time by showing the interface or flow.

WHAT TO NOTICE

Show the product, not just adjectives

One terminal screenshot replaces a paragraph of description. Participants should explain what the user does on screen, what job it performs, and what evidence would prove users return to it.

Use this pattern for Product / Solution.

Problem Slide Formula

Make the pain concrete and economically meaningful.

[Customer] loses **[time / money / risk]** because **[current workflow]** fails in **[situation]**.

01

Customer

Who

02

Loss

Cost

03

Workflow

Current way

04

Situation

When it happens

Solution Must Be Easy to Understand

Do not explain technology before the user value is obvious.

01

One-Sentence Solution

Describe what the product does in plain user language.

EXAMPLE

accept digital payments in minutes.

02

Workflow Change

Show what changes in the user daily workflow after adoption.

EVIDENCE

before / after workflow or demo path.

03

Proof of Viability

Connect solution claims to pilots, usage, retention, or operational data.

EVIDENCE

pilot results, repeat users, uptime.

04

Why It Wins

Make the advantage simple enough to remember after the meeting.

EVIDENCE

speed, cost, access, trust, data.

Market Size Needs a Bottom-Up Anchor

TAM alone is not enough; investors need to see how the first market becomes reachable.

01

TAM

The broad long-term opportunity. Useful for ambition, weak for immediate proof.

EXAMPLE

total SME payment volume in a region.

02

SAM

The market reachable under current product, geography, regulation, and channel constraints.

EXAMPLE

online merchants in Lagos and Abuja that can adopt a payment API.

03

SOM

The first winnable beachhead. This should connect to GTM and traction assumptions.

EXAMPLE

a specific vertical, city, or customer behavior.

04

Bottom-Up Logic

Build the number from customers × price × frequency, not from population × wishful penetration.

EXAMPLE

merchants × monthly transactions × take-rate.

Example: Market Size Needs a Reachable Beachhead

Market slides work best when ambition and first reachable segment are both visible.

WHAT TO NOTICE

Big market plus first beachhead

TAM \$16.4B → SAM \$10.2B → SOM \$7.3B, with a stated FYE27 target of \$70M ARR — under 1% of SOM. The credibility comes from the small penetration claim, not the big number.

Use this pattern for TAM / SAM / SOM.

Show How the Model Works

Connect S3–S5 outputs into investor language with enough detail to be credible.

01

Revenue

Who pays, for what, how often, and why the price fits the value created.

EXAMPLE

transaction fee, SaaS subscription, commission, or service margin.

02

Cost

What must be funded to deliver the product and acquire customers.

EXAMPLE

technology, compliance, field operations, agent incentives, support.

03

Channel

How customers are reached and converted. Channel is not the same as GTM.

EXAMPLE

developer-led, agent network, partnerships, direct sales, community.

04

Metrics

Which numbers prove the model is working, not just growing.

EXAMPLE

activation, repeat usage, retention, transaction volume, gross margin.

05

Runway

How much time the current or requested capital buys to prove the next milestone.

EXAMPLE

18 months to prove repeatable merchant acquisition.

Traction Is Evidence of Reduced Risk

Show behavior, not vanity metrics.

01 Customer Evidence	Interviews, pilots, LOIs, paid trials, and waitlist quality show whether the pain is real enough to move.	KEY METRICS qualified interviews, LOIs, pilot-to-paid conversion, CAC signal
02 Usage	Activation, repeat usage, and retention prove the product is becoming part of a real workflow.	KEY METRICS MAU, DAU/MAU, activation rate, cohort retention, churn
03 Revenue	Paid orders, transaction volume, gross margin, or recurring revenue make demand harder to dismiss.	KEY METRICS ARPU, MRR/ARR, TPV, gross margin, take-rate, repeat revenue
04 Partnerships	Partnerships matter when they create distribution, trust, data access, or regulatory access.	KEY METRICS active partners, partner-sourced leads, channel conversion, signed MOUs
05 Pipeline	Pipeline is evidence only when opportunity quality, decision makers, and next steps are clear.	KEY METRICS qualified pipeline, stage conversion, sales cycle, expected close rate, LTV

Use Case Evidence on the Right Pitch Deck Page

The company examples from earlier sessions should become proof inside the investor story, not isolated classroom stories.

01

Problem / Why Now

Use Paystack, LifeBank, Spiro, or Thrive Agric when the slide needs a concrete pain with cost, urgency, or broken workflow.

DECK USE

show the problem as a repeated reality, not a founder opinion.

02

Product / Solution

Use Flutterwave, Paystack, Zoom, or Tesla when the slide needs a focused solution statement tied to a specific pain.

DECK USE

explain what changes in the user's workflow.

03

Business Model

Use Moniepoint, OPay, M-KOPA, PAYG, transaction-fee, subscription, and direct-sales cases when the slide needs revenue logic.

DECK USE

connect who pays, pricing unit, frequency, and margin logic.

04

Traction / Fundraising

Use Tesla reservations, paid pilots, LOIs, active transactions, repeat usage, and deposits when the slide needs risk-reducing proof.

DECK USE

show behavior that investors can diligence.

Example: Traction Slide Should Show Progress, Not Decoration

Investors need evidence that behavior has already started changing.

In the last 18 months we built the foundation		
Product	Clients	Investors
Live since 12 months with 99% historical uptime.	50+	BWC ff Founderful al6z
Markets	Payment partner	Advisory network
  	        	    
Status Quo		Powered by 

WHAT TO NOTICE

Progress beats aspiration

Six tiles: 12 months live at 99% uptime, 50+ clients, named investors, three markets, payment partners, advisory network. Ask which tiles prove adoption and which are only credibility signals.

Use this pattern for Traction / Momentum.

Powerful Presentation Tips

Less is more: investors should remember the decision, not fight the slide.

GUY KAWASAKI 10 / 20 / 30 rule — 10 slides, 20 minutes, 30-point font.

10

Slides

Keep the core story short enough to repeat from memory.

20

Minutes

Leave time for questions, objections, and investor thinking.

30

Point Font

Large type forces one clear message per slide.

RULE Use one point per slide. Show evidence over decoration. Cut anything that does not help the investor say yes, no, or tell me more.

PART 3

Competition, Team, Financials, Ask

The final pages answer whether this company can win and what it needs next.

Competition Is Broader Than Direct Rivals

The strongest competition is often the current workaround.

01

Direct Rival

A company solving the same problem with a similar product.

EXAMPLE

another payment gateway, lending app, marketplace, or logistics startup.

02

Indirect Rival

A different solution customers use for the same job.

EXAMPLE

POS agent, bank transfer, WhatsApp coordination, informal credit.

03

Status Quo

Manual or informal workaround that feels familiar and low-risk.

EXAMPLE

cash, paper ledger, spreadsheet, phone calls, trusted middleman.

04

Do Nothing

Customers may tolerate the pain if urgency is not strong enough.

EXAMPLE

weak pain means the real competitor is inertia.

Do Not Say There Is No Competition

No competition usually means weak understanding.

RISK

Weak Claim

"We have no competitors."

BETTER DIRECTION

Strong Claim

"Customers currently solve this through X,
but we win because Y."

Example: Competition Can Be Shown as a Market Map

A good competition slide helps investors understand where the company plays and why its position is different.

WHAT TO NOTICE

Map alternatives before claiming advantage

DeckMatch maps its position as a workflow between ingest sources and existing CRM / notification tools — the incumbents are drawn in, not ignored. Name direct rivals, indirect tools, and the status quo.

Use this pattern for Competition.

Unfair Advantage Must Be Specific

Avoid generic claims like "first mover" unless the advantage compounds over time.

01

Data

A unique learning loop improves the product or underwriting over time.

EXAMPLE

transaction behavior, repayment data, merchant performance.

02

Distribution

Access to customers is hard for others to copy.

EXAMPLE

agent network, school network, hospital network, community trust.

03

Trust

Credibility with a high-friction customer group reduces adoption barriers.

EXAMPLE

local presence, regulatory credibility, domain reputation.

04

Network

The product becomes more valuable as more users or partners join.

EXAMPLE

marketplace liquidity, payment acceptance network.

05

Execution Insight

The team knows a specific operational truth outsiders miss.

EXAMPLE

founder-market fit in Nigerian SME workflows.

Team Slide Should Explain Fit

Investors ask why this team can solve this problem now.

01

Founder-Market Fit

Show lived experience, domain access, or repeated exposure to the problem.

METRIC

years in market, customer access.

02

Execution Ability

Show what the team has built, sold, operated, or scaled before.

METRIC

shipped product, revenue, partnerships.

03

Domain Access

Explain why this team can reach customers, partners, regulators, or data faster.

METRIC

signed channels, pipeline, advisors.

04

Gaps & Hiring Plan

Name the missing capabilities and how funding fills them.

METRIC

key hires, runway, milestone ownership.

Example: Team Slide Should Prove Fit, Not Just Introduce People

Founder-market fit, execution history, and domain access should be visible quickly.

Our founding team comes from AI and industry

Sahitya Senapathy	Sanjeev Tara	Josh Ludan	Amil Naik	Yuanbo Chen
				
Founder/CEO Palantir Manufacturing UPenn M&T, Wharton '24	Advisor to CEO Group President, Berkshire Hathaway Automotive, Fmr.	Founding Eng UPenn PhD Program Farallon Capital Mgmt	Founding Eng UT Austin McCombs YCombinator Startup Eng	Founding Eng UC Berkeley EECS ByteDance Research
				
				

Copyright © 2024 Endeavor AI, Inc. Proprietary & Confidential | 9

WHAT TO NOTICE

Team credibility is evidence

Each founder card carries role, prior employer, and institution — Palantir, Berkshire Hathaway, Farallon, YC, ByteDance. The logos do the arguing. Avoid generic bios; show why this team can reach these customers.

Use this pattern for Team.

Fundraising Ask Formula

Make the ask concrete and milestone-based.

We are raising **[amount]** to reach **[milestones]** in **[months]**, enabling **[next round or revenue goal]**.

01

Amount

How much

02

Milestones

What changes

03

Months

Runway

04

Next Step

Why it matters

Example: Ask Slide Turns Money Into Milestones

The ask should explain what the round will prove, not only how much money is wanted.

We're raising a \$7M seed round to revitalize American manufacturing with AI.

1

Grow our engineering team

Hire brilliant research engineers and software developers to improve our platform architecture and workflows.

2

Develop and deploy additional workflows

Expand business use cases supported in sales, inventory, operations planning, supply chain, finance, and procurement.

3

Expand our Go-to-Market motion

Develop direct sales workforce and establish scalable channels to grow product footprint in industrial markets.

WHAT TO NOTICE

Capital should buy proof

\$7M seed split into three numbered workstreams: engineering hires, additional workflows, GTM expansion. State amount, use of funds, timeline, and the milestone that reduces investor risk.

Use this pattern for Ask / Use of Funds.

PART 4

Investor Communication

The pitch continues after the meeting.

Pitch Deck vs IR Deck vs IM Deck

Different investor documents serve different decisions. Do not use one deck for every situation.

FIRST MEETING / FUNDRAISING STORY

Pitch Deck

Short, visual, evidence-led narrative designed to earn the next conversation.

Goal: get interest, questions, and follow-up.

ONGOING INVESTOR RELATIONSHIP

IR Deck

Regular update deck for existing or warm investors: KPIs, progress, risks, and asks.

Goal: maintain trust and momentum.

INVESTMENT MEMORANDUM

IM Deck

Detailed transaction document for diligence, strategic buyers, PE, or later-stage investors.

Goal: support an investment decision.

Pitch Deck Structure

A pitch deck should move from problem belief to investment ask without losing the reader.

01 Cover / One-liner

02 Problem

03 Solution / Product

04 Why Now

05 Market / ICP

06 Business Model

07 Traction

08 GTM

09 Competition

10 Financials / Use of Funds

11 Team

12 Ask / Next Milestone

RULE OF THUMB If a slide does not reduce risk or create belief, it belongs in the appendix.

IR Deck Structure

IR decks are about cadence: what changed, what was learned, and what needs help.

Snapshot

one-page status: cash, runway, growth, biggest ask

KPIs

MAU/DAU, ARPU, CAC, LTV, retention, gross margin

Financial Performance

revenue, burn, runway, budget variance

Traction Since Last Update

customers, pilots, revenue, product usage

Product / GTM Progress

launches, partnerships, channel results

Pipeline

qualified opportunities, stage, decision maker, close date

Risks & Asks

key blockers and the specific help requested

Next Milestones

what will be true by the next update

CADENCE IR communication should feel predictable: short, honest, metric-driven, and useful.

IM Deck Structure Example

An IM deck is deeper than a pitch deck. It supports diligence and investment committee review.

MAJOR CATEGORY	SUBSECTIONS TO INCLUDE
Business Overview	company story, product, market, customer, competitive position
Commercial Evidence	traction, revenue model, pipeline, GTM, retention, partnerships
Financials	historical P&L, forecast, unit economics, working capital, use of funds
Legal / Transaction	cap table, governance, major contracts, IP, compliance, diligence docs
Risk & Exit	risk factors, mitigation plan, exit routes, buyer universe, valuation logic
WHEN TO USE	Use IM only when the investor needs depth. For a first pitch, too much diligence detail slows the story.

Different Pitches Need Different Depth

Match the format to the context instead of using one generic pitch everywhere.

01

Handshake Pitch

10–20 seconds. Make the company category and customer obvious.

EXAMPLE

"We help Nigerian SMEs accept and track digital payments."

02

Elevator Pitch

30–60 seconds. Add problem, solution, and why now.

EXAMPLE

useful at events, intros, and first investor contact.

03

Demo Day Pitch

Short narrative with strong proof and memorable sequencing.

EXAMPLE

focus on problem, traction, market, team, and ask.

04

Investor Meeting

A discussion, not a monologue. Prepare the deck and the questions behind it.

EXAMPLE

be ready to open the model, data room, and customer evidence.

05

Follow-Up Deck

More evidence and detail for investors who want to revisit or share internally.

EXAMPLE

include appendix, data, customer proof, financial assumptions.

Prepare for Investor Questions

Questions reveal perceived risk. Strong answers connect back to evidence.

01

Market

How big is the reachable market and why is this beachhead credible?

ANSWER WITH
bottom-up SOM, not just TAM.

02

GTM

How will customers be acquired repeatedly and at what cost?

ANSWER WITH
channel sequence, conversion assumption, CAC evidence.

03

Economics

Can margins, pricing, payback, and runway work?

ANSWER WITH
simple unit economics with visible assumptions.

04

Defensibility

Why will this become hard to copy as it grows?

ANSWER WITH
distribution, data, trust, network, or regulatory position.

05

Use of Funds

What will this capital prove before the next round?

ANSWER WITH
merchant count, transaction volume, retention, or revenue milestone.

Follow-Up Builds Trust

Investor communication is judged by speed, clarity, and evidence discipline.

01

Same Day

Send a short thank-you, deck, and the next requested item.

EXAMPLE

include 1–2 bullets on what was discussed.

02

24–48 Hours

Provide requested documents while interest is still fresh.

EXAMPLE

model, data room, customer references, pilot evidence.

03

Weekly

Use concise milestone updates only when there is meaningful progress.

EXAMPLE

new signed pilot, revenue milestone, partner LOI.

04

Data Room

Organize evidence so diligence feels professional.

EXAMPLE

legal, financial, traction, product, customer, team.

05

Next Ask

Always make the next action clear.

EXAMPLE

second meeting, partner intro, term sheet discussion, or specific feedback.

FINAL OUTPUT

BM Track Completion

From problem to investor communication

A strong pitch is the visible layer of a validated business model.
